

Report – Task 3

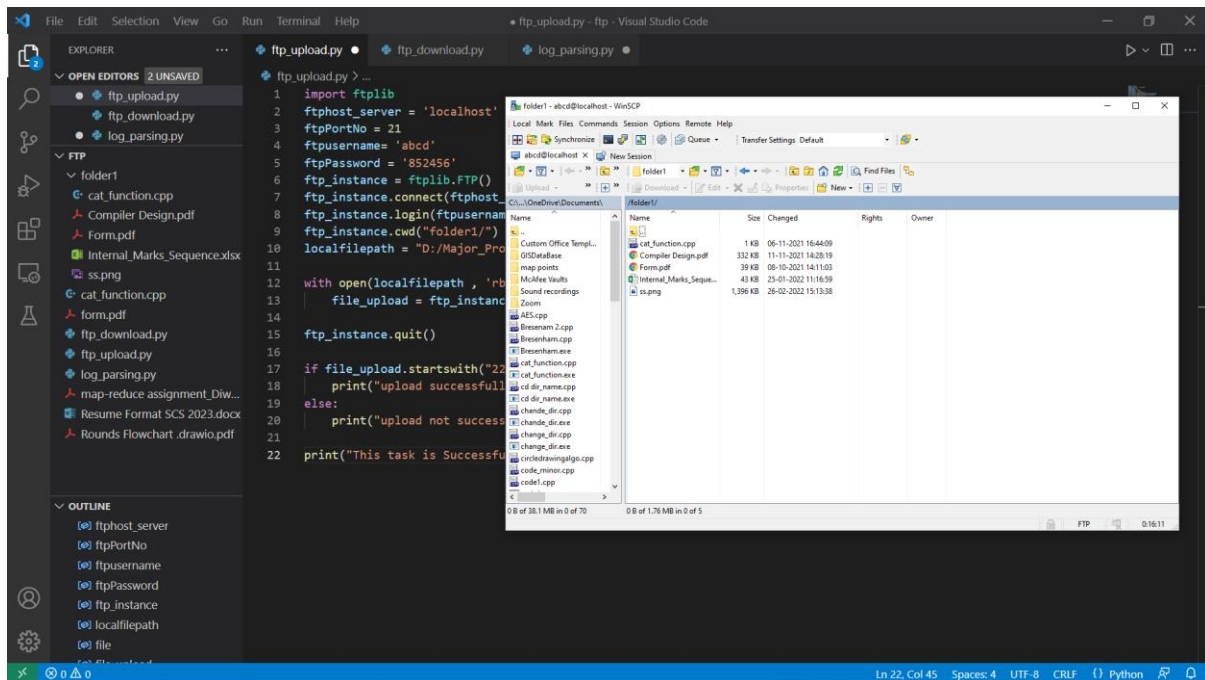

Explanation:

1) Uploading a file using FTP

Firstly, I created a FTP server using winSCP and FireZilla Server and trying to upload the file “task2.log” from my D: drive to the ftpserver.

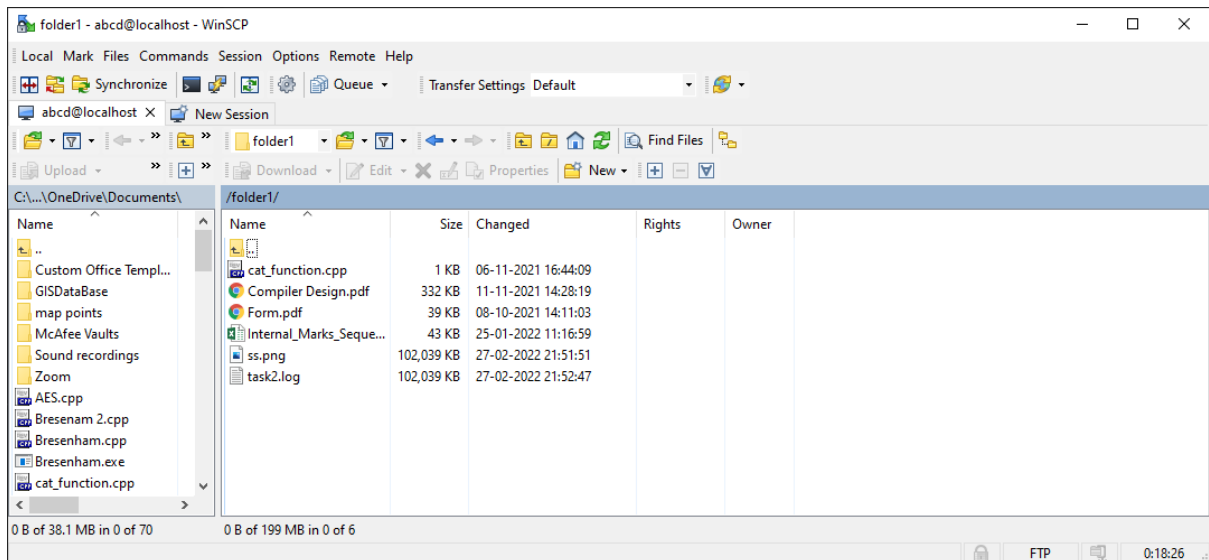

For this task I imported ftplib library and after user authentication I tried to upload a file in a particular folder named **folder1** in localhost server of winSCP.

As you can see in thw screenshot there in no file named **task2.log** earlier.

After successfully running the code, file **task2.log** is successfully uploaded in **/folder1/** directory.

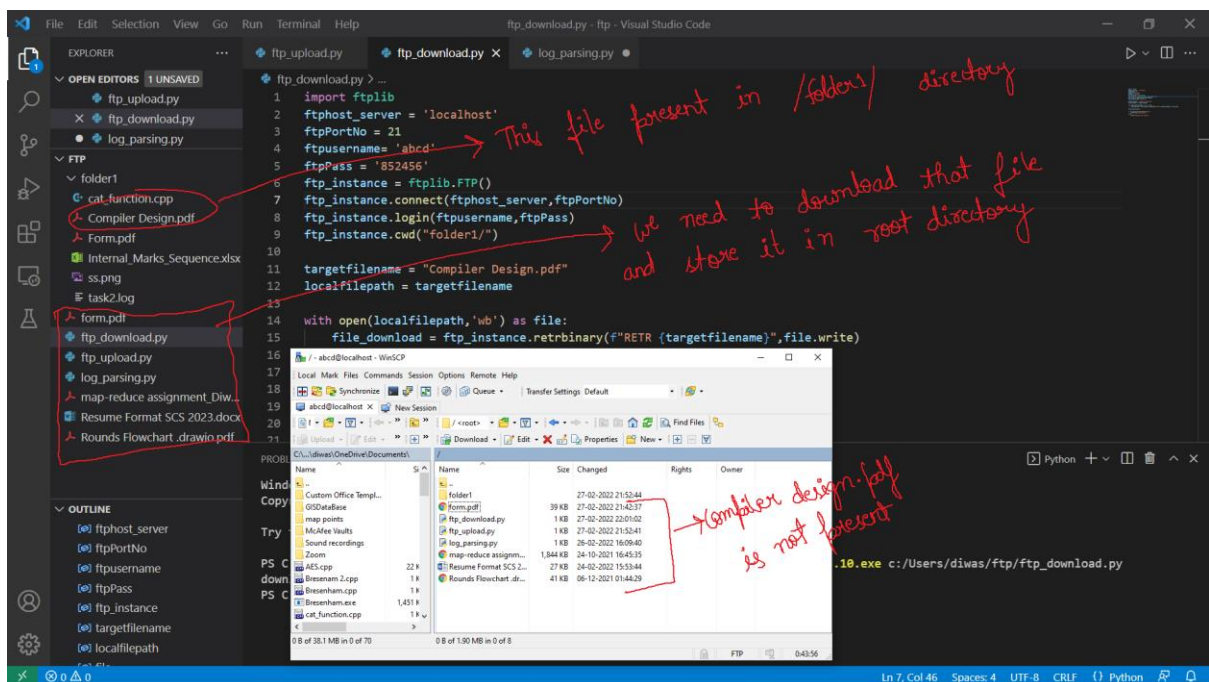

Screenshot is attached below, task2.log is present in the desired directory.

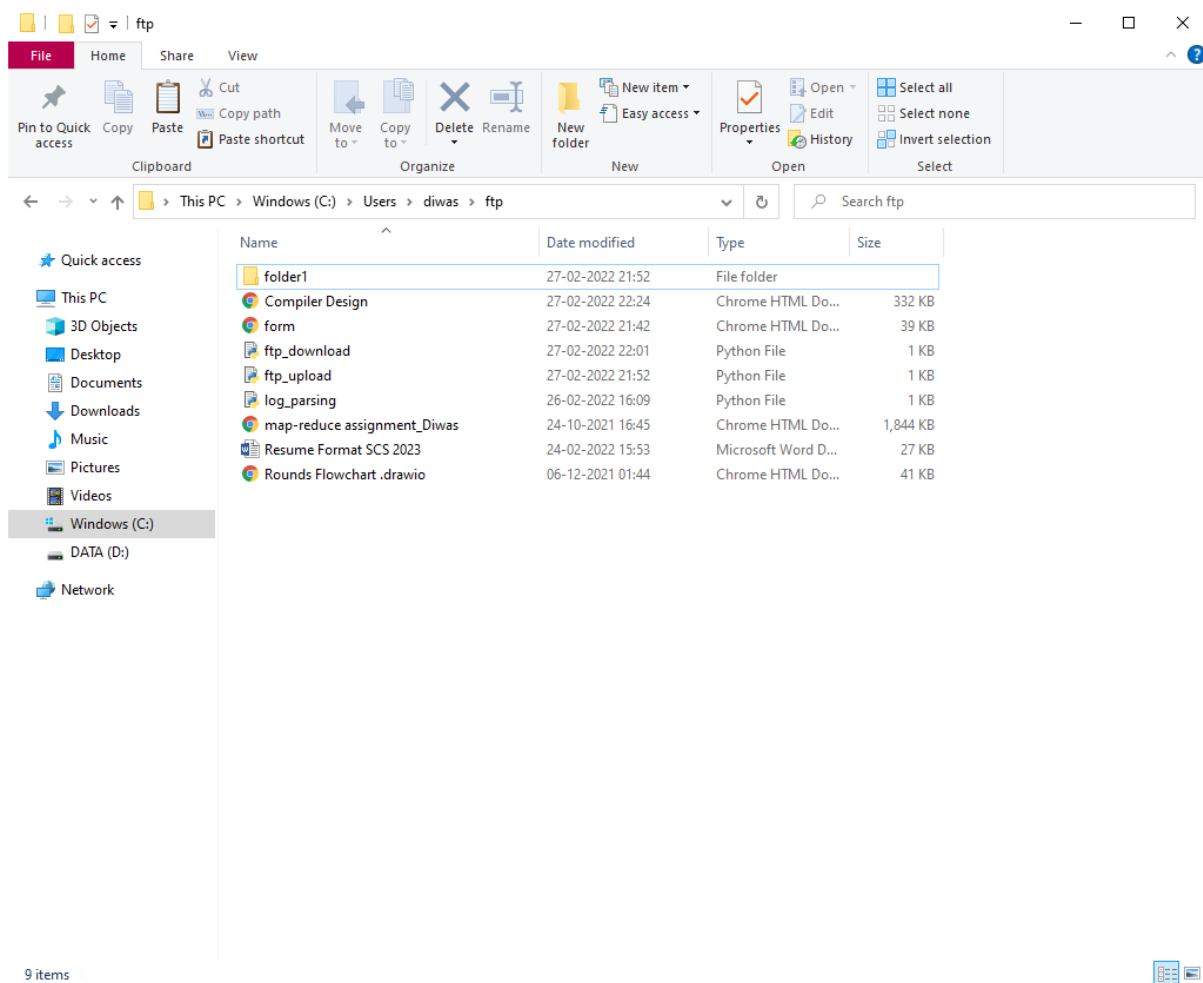

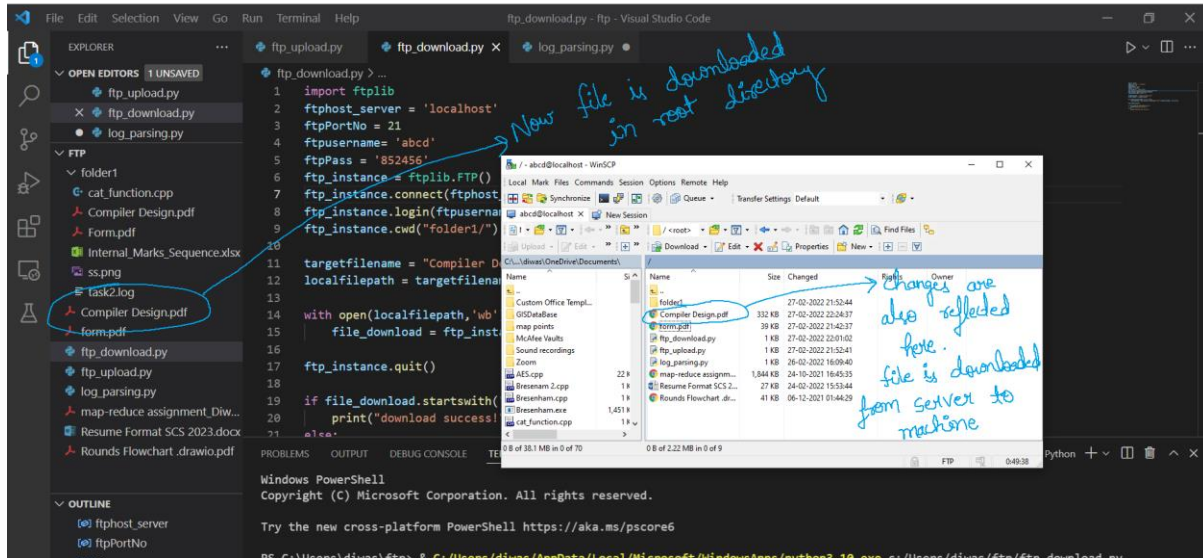

2) Downloading a file using FTP server

For this task I imported ftplib library and after user authentication I tried to download a file in root folder named **FTP**.

As you can see in the screenshot there is no file named **Compiler Design** earlier.

After successfully running the code, file **Compiler Design.pdf** is successfully downloaded in **root** directory

This task is completed successfully.

Thank you!
